FASoft releases version 4.0 of n-Track Studio

n-Track Studio 4.0 is a multitrack recording and editing software for Windows. The program allows recording, mixing and editing of a virtually unlimited number of audio and MIDI tracks. The new 4.0 version adds a number of improvements to the already feature packed program that for just 49\$ offers a complete and powerful software recording environment.

Among the many new features, the program now includes a compressor/dynamics plug-in, Always-On effects selectable and automatically inserted in every new channel, direct support for audio CD burning, built-in EQ with spectrum analyzer now available on all channels, better management of installed DirectX and VST plug-ins including a favorites list that allows the user to only display frequently used plug-ins, support for MIDI instruments definition files.

The program now includes a function to transfer tracks between different users running n-Track Studio and working on the same song at remote locations, making easier to collaborate in the recording of the various tracks of a song over the internet.

n-Track Studio 4.0 works on Windows 98, ME, NT, 2000 and XP operating systems. It supports DirectX and VST plug-ins and instruments and can act as a ReWire host. The program's ease of use makes it perfect for small studios and for music hobbyists who want to record their own music.

n-Track Studio 4.0 costs 49\$ and 75\$ (24 bit soundcards version). For more information, visit the program's web site (<http://www.ntrack.com>) or contact the author of the program, Flavio Antonioli, via G. Viotti 10, 00124 Rome, Italy.
