

n-Track Software releases n-Track for Mac (beta)

After 15 years of being Windows-only n-Track is finally available for Mac computers

Rome, Italy, 7-26-10. After months of development n-Track Software announces today the release of n-Track for Mac (beta).

With the release of the Mac version n-Track has now become the ideal tool for cross-platform audio recording and editing. n-Track users can now exchange their song files and collaborate with both Mac and Windows users.

The Mac version is FREE for all current n-Track 6.x for Windows users.

n-Track for Mac v0.4.2 is compatible with Intel Macs with Tiger (10.4.x), Leopard (10.5.x) and Snow Leopard (10.6.x) Mac OS X operating systems. It is available in two separate 32 and 64 bit downloads, both can be installed on the same Mac.

n-Track for Mac supports VST 3.x and 2.x plugins and virtual instruments.

Support for AU plugins and instruments will be added before version 1.0 is released.

n-Track for Mac supports CoreAudio multichannel 16, 24 and 32 bit audio drivers.

n-Track Studio is the perfect audio recording and editing software for small recording studios and hobbyist musicians that want to record and produce their own music.
