

## **n-Track Software releases n-Track Studio 7**

*The new version of the popular DAW (Digital Audio Workstation) software adds many improvement and new features*

Rome, Italy, 6-4-12. n-Track Software announces today the immediate availability of n-Track Studio 7 and n-Track for Mac 2.0. Version 7.0 comes 4 years after the release of version 6.0 and 17 years after the very first version of n-Track came out.

The new version includes the nBridge module to allow using legacy 32 bit plugins inside the 64 bit version of the application and to *sandbox* plugins in a separate process. Sandboxing protects the program from crashing and losing the user work in the event that the 3<sup>rd</sup> party plugin fails because of a bug (i.e. a software defect), much like recent web browsers open web pages into separate processes so that if a web page crashes the other pages remain active.

Version 7 features a redesigned user interface, which streamlines many editing tasks. It also includes n-Track Drums 2.0, the percussion + step sequencer component, with a new sounds library, and improves compatibility with third party audio plugins and instruments.

n-Track Studio is offered in two variants, the Standard edition costs \$49, the EX edition costs \$89 and contains more advanced features such surround mixing, synch with external devices and editing of individual samples.

Existing users can upgrade to the latest version for \$34.

A fully working evaluation version is available for download at <http://ntrack.com>

*n-Track Software develops n-Track Studio for Windows, Mac and iOS. n-Track is the ideal audio recording and editing software for small recording studios and hobbyist musicians that want to record and produce their own music.*
